### **1. Laws of Motion**

The Laws of Motion, formulated by Sir Isaac Newton, are cornerstone principles in physics that describe the relationship between the motion of an object and the forces acting upon it.

1. **First Law (Law of Inertia):** An object remains at rest or in uniform motion in a straight line unless acted upon by an external force.
2. **Second Law:** The acceleration of an object is directly proportional to the net force acting upon it and inversely proportional to its mass ( $F = ma$ ).
3. **Third Law:** For every action, there is an equal and opposite reaction.

Understanding these laws helps students analyze real-life scenarios, such as vehicle motion, sports dynamics, and more.

## 2. Gravitation

Gravitation describes the attractive force between any two masses in the universe. It explains phenomena such as planetary motion, tides, and weight.
