skills for her later work in computing.

Military and Professional Career

Hopper joined the U.S. Navy during World War II, where she was assigned to the Bureau of Ships Computation Laboratory at Harvard University. It was here that she encountered the Mark I computer, one of the earliest electromechanical computers. Recognizing the potential of computing technology, Hopper dedicated her career to advancing computer science. Her military career was marked by numerous achievements, including the development of programming languages and her advocacy for user-friendly programming. She retired from the Navy as a rear admiral but continued her work in computing, earning her a reputation as a trailblazer and innovator.

The Invention of the Information Age

Defining the Information Age

The term "Information Age" refers to the current era characterized by the rapid shift from traditional industry to an economy based on information technology. This transformation has been driven largely by innovations in computing, telecommunications, and data management. The invention of the information age involves several key developments:

1. The advent of electronic computers capable of storing and processing vast amounts of data.
2. The creation of programming languages that made computers accessible and programmable by humans.

3. The development of networking technologies that enabled data sharing across distances.
4. The emergence of the internet, connecting computers globally and facilitating the free flow of information.

Grace Hopper's Role in Shaping the Information Age
