Sample Questions and Corresponding Answers from the Key

Question 1: What happens to the frequency of the advantageous trait over generations?

1. Answer: The frequency of the advantageous trait increases over generations due to natural selection. Organisms with traits that improve their survival and reproduction are more likely to pass these traits to their offspring, leading to a higher prevalence of advantageous traits in the population.

Question 2: How does environmental change impact the population's traits?

1. Answer: Environmental change can alter which traits are advantageous. For example, if a change increases predation on certain phenotypes, those traits may decrease in frequency, while traits that confer better survival in the new environment become more common.

Question 3: What role do mutations play in natural selection according to the simulation?

1. Answer: Mutations introduce new genetic variation into the population. While most mutations are neutral or harmful, some can produce beneficial traits that increase an organism's fitness, thereby contributing to evolution through natural selection.

Question 4: Why does genetic diversity matter in a population?

1. Answer: Genetic diversity provides a pool of traits that can be beneficial under changing environmental conditions. It increases the likelihood that some individuals will possess advantageous traits, enhancing the population's resilience and adaptability.

Question 5: How does the simulation demonstrate the concept of survival of the fittest?

1. Answer: The simulation shows that organisms with traits that give them survival advantages are more likely to reproduce successfully. Over generations, these traits become more common, illustrating "survival of the fittest."

Common Misconceptions Clarified by the Answer Key

Misconception 1: Evolution Occurs for a Purpose

1. Clarification: Evolution is a natural process driven by genetic variation and environmental pressures, not goal-oriented change.

Misconception 2: Organisms Evolve Because They Need To

1. Clarification: Traits that confer survival advantages become more common over generations; organisms do not develop traits because they "need" them.

Misconception 3: Mutations Are Always Harmful

1. Clarification: Mutations can be beneficial, neutral, or harmful. Beneficial mutations contribute to adaptation and evolution.

Misconception 4: Natural Selection Acts on Individuals

1. Clarification: Natural selection acts on populations over time, not on individual organisms. The advantageous traits become more common across generations.
