Understanding the Basics of the Nervous System

What Is the Nervous System?

The nervous system is a complex network of cells and tissues responsible for coordinating all voluntary and involuntary actions within the body. It transmits signals between different parts of the body and the brain, enabling perceptions, responses, and regulation of internal processes. The nervous system is broadly divided into two major components:

1. **The Central Nervous System (CNS):** Comprising the brain and spinal cord, it processes information and generates responses.
2. **The Peripheral Nervous System (PNS):** Consisting of nerves outside the CNS, it connects limbs and organs to the CNS.

Understanding the key structures within these components is essential for solving crossword clues related to the nervous system.

Core Components of the Nervous System

- Neurons: The fundamental units of the nervous system responsible for transmitting electrical signals. - Glial Cells: Supportive cells that provide insulation, nutrients, and cleanup functions for neurons. - Nerves: Bundles of axons that carry signals to and from the CNS. - Synapse: The junction where two neurons communicate. Key Terms for Crossword Answers: - Neuron - Axon - Dendrite - Myelin - Synapse - Glia - Cranial nerves - Spinal nerves
