

Laboratory Exercise 7 The Integumentary System

Laboratory Exercise 7: The Integumentary System is a comprehensive practical designed to deepen understanding of the body's largest organ system—the integumentary system. This laboratory exercise provides students with hands-on experience in examining the skin's structure, functions, and associated structures such as hair, nails, and glands. By engaging in this exercise, students gain insight into how the integumentary system protects the body, regulates temperature, and contributes to sensory perception, all crucial for maintaining overall health.

Understanding the Integumentary System

The integumentary system encompasses the skin, hair, nails, and various glands. It serves as the body's first line of defense against environmental hazards, pathogens, and physical injuries. This system also plays vital roles in temperature regulation, sensation, vitamin D synthesis, and excretion.

Components of the Integumentary System

1. **Skin:** The largest organ of the body, composed of three primary layers—epidermis, dermis, and hypodermis.
2. **Hair:** Protects the scalp and other body parts, helps in sensory functions.
3. **Nails:** Protect the tips of fingers and toes, assist in grasping objects.
4. **Glands:** Including sweat glands, sebaceous (oil) glands, and others that produce essential secretions.

Objectives of Laboratory Exercise 7

This laboratory exercise aims to:

1. Identify and describe the structural components of the skin and associated structures.
2. Examine the microscopic features of skin tissues.
3. Understand the functions of different skin layers and appendages.
4. Learn about common skin conditions and their implications for health.
5. Develop observational and analytical skills through hands-on activities and microscopy.

Materials Needed

1. Microscope slides of skin tissue samples
2. Prepared slides of epidermis and dermis layers

3. Dissection tools
4. Magnifying glasses or hand lenses
5. Model of skin structure
6. Samples of hair, nails, and glands
7. Staining solutions (e.g., H&E stain)

Procedures and Activities in Laboratory Exercise 7

1. Observation of Skin Structures

Students begin by examining prepared slides of skin tissues under a microscope. They should identify:

1. Stratum corneum (outermost layer)
2. Stratum basale (deepest layer of the epidermis)
3. Dermis, including papillary and reticular layers
4. Hair follicles and sebaceous glands
5. Sweat glands and blood vessels

This activity helps students differentiate between the layers and understand their roles.

2. Dissection and Examination of Hair and Nails

Students dissect samples of hair and nails to observe their structure:

1. Hair shaft, root, and follicle
2. Nail plate, nail bed, and lunula

They analyze how these structures grow and their protective functions.

3. Identification of Skin Appendages and Glands

Using models or real samples, students identify:

1. Sebaceous (oil) glands and their role in lubricating the skin
2. Sweat glands (eccrine and apocrine) and their role in thermoregulation

This activity illustrates how skin maintains homeostasis.

4. Skin Color and Pigmentation

Students observe skin samples or images to understand pigmentation factors:

1. Melanin and its role in skin color and UV protection
2. Carotene and hemoglobin contributions

Discussion on how pigmentation varies among individuals and its evolutionary

significance.

5. Recognizing Common Skin Conditions

Students review case studies or images of skin conditions such as:

1. Acne
