Core Foundations of Algorithms in Neapolitan's Framework

Neapolitan's approach to algorithms is rooted in a few core principles that serve as the backbone for his solutions. These include probabilistic reasoning, graph-based representations, and computational efficiency.

Probabilistic Reasoning and Bayesian Networks

At the heart of Neapolitan's work lies the concept of probabilistic reasoning, which models uncertainty explicitly. Bayesian networks, also known as belief networks, are directed acyclic graphs (DAGs) where nodes represent random variables, and edges encode conditional dependencies. Key features:
