

Sample Mba Statistics Questions With Answers

Sample MBA statistics questions with answers In the realm of MBA programs, statistics is a fundamental subject that equips students with the analytical skills necessary to interpret data, make informed decisions, and support strategic planning. To excel in this discipline, students often practice with sample questions that mirror real-world scenarios and exam formats. These questions not only help in understanding core concepts but also build confidence in applying statistical methods to business problems. This article provides a comprehensive collection of sample MBA statistics questions along with detailed answers, covering topics such as descriptive statistics, probability, hypothesis testing, regression analysis, and more. Whether you are preparing for an exam or seeking to reinforce your understanding, these questions serve as valuable practice tools.

Basic Concepts in Descriptive Statistics

Question 1: Mean, Median, and Mode

Suppose the following data set represents the monthly sales (in units) for a company over 10 months: [50, 55, 60, 60, 65, 70, 70, 70, 75, 80] What are the mean, median, and mode of this data set?

Answer:

- Mean: [$\text{Mean} = \frac{50 + 55 + 60 + 60 + 65 + 70 + 70 + 70 + 75 + 80}{10} = \frac{655}{10} = 65.5$]
- Median: Since there are 10 data points, the median is the average of the 5th and 6th values: [$\text{Median} = \frac{65 + 70}{2} = \frac{135}{2} = 67.5$]
- Mode: The most frequently occurring value is 70 (appears 3 times), so: [$\text{Mode} = 70$]

Probability and Distributions

Question 2: Basic Probability

A company has 4 managers and 6 employees. If a manager and an employee are chosen at random, what is the probability that both are selected?

Answer:

Assuming the selection involves choosing one manager and one employee independently: - Total managers = 4 - Total employees = 6 - Total individuals = 10
Number of ways to select one manager = 4
Number of ways to select one employee = 6
Total possible pairs = $4 \times 6 = 24$
Since each pair is equally likely, the probability that a randomly selected pair consists of one manager and one employee is: [$P = \frac{\text{Number of favorable pairs}}{\text{Total pairs}} = 1$] (since any pair is valid)
But if the question asks: "What is the probability that both selected individuals are managers?" then: [$P = \frac{\text{Number of ways to select 2 managers}}{\text{Number of ways to select any 2 individuals}} = \frac{\binom{4}{2}}{\binom{10}{2}} = \frac{6}{45} = \frac{2}{15}$]
Similarly, for both being employees: [$P = \frac{\binom{6}{2}}{\binom{10}{2}} = \frac{15}{45} = \frac{1}{3}$]

Hypothesis Testing

Question 3: Testing the Mean

A sample of 30 sales representatives has an average monthly sales of 200 units with a standard deviation of 20 units. Test at the 5% significance level whether the average sales of all sales representatives is different from 195 units. Assume the population standard deviation is unknown.

Answer:

This is a two-tailed t-test for the population mean. Step 1: State hypotheses - Null hypothesis $(H_0): (\mu = 195)$ - Alternative hypothesis $(H_1): (\mu \neq 195)$ Step 2: Calculate the test statistic $[t = \frac{\bar{x} - \mu_0}{s / \sqrt{n}} = \frac{200 - 195}{20 / \sqrt{30}} = \frac{5}{3.651} \approx 1.368]$ Step 3: Determine degrees of freedom $[df = n - 1 = 29]$ Step 4: Find the critical t-value At $(\alpha=0.05)$, two-tailed test, for $(df=29)$: $[t_{critical} \approx \pm 2.045]$ Step 5: Make a decision Since $(|t| = 1.368 < 2.045)$, we fail to reject the null hypothesis. Conclusion: There is no sufficient evidence at the 5% significance level to conclude that the average sales differ from 195 units.

Regression Analysis

Question 4: Simple Linear Regression

A company wants to predict sales based on advertising expenditure. The following data points are collected: | Advertising (X) in \$100s | Sales (Y) in units | ||| 1 | 20 | | 2 | 24 | | 3 | 30 | | 4 | 36 | | 5 | 40 | Calculate the regression equation $(Y = a + bX)$.

Answer:

Step 1: Calculate means $[\bar{X} = \frac{1 + 2 + 3 + 4 + 5}{5} = 3 \quad \bar{Y} = \frac{20 + 24 + 30 + 36 + 40}{5} = 30]$ Step 2: Calculate (b) (slope) $[b = \frac{\sum (X_i - \bar{X})(Y_i - \bar{Y})}{\sum (X_i - \bar{X})^2}]$ Calculate numerator: $[\sum (X_i - \bar{X})(Y_i - \bar{Y}) = (1-3)(20-30) + (2-3)(24-30) + (3-3)(30-30) + (4-3)(36-30) + (5-3)(40-30) = (-2)(-10) + (-1)(-6) + 0 + (1)(6) + (2)(10) = 20 + 6 + 0 + 6 + 20 = 52]$ Calculate denominator: $[\sum (X_i - \bar{X})^2 = (-2)^2 + (-1)^2 + 0^2 + 1^2 + 2^2 = 4 + 1 + 0 + 1 + 4 = 10]$ Thus, $[b = \frac{52}{10} = 5.2]$ Step 3: Calculate intercept (a) $[a = \bar{Y} - b \bar{X} = 30 - 5.2 \times 3 = 30 - 15.6 = 14.4]$ Regression Equation: $[Y = 14.4 + 5.2X]$

Probability Distributions and Business Applications

Question 5: Normal Distribution

The daily demand for a product follows a normal distribution with a mean of 500 units and a standard deviation of 50 units. What is the probability that on a randomly selected day, the demand exceeds 550 units?

Answer:

Step 1: Find the z-score $[z = \frac{X - \mu}{\sigma} = \frac{550 - 500}{50} = 1]$ Step 2: Find the probability Using standard normal distribution tables or a calculator: $[P(Z > 1) = 1 - P(Z \leq 1) \approx 1 - 0.8413 = 0.1587]$

Therefore, there is approximately a 15.87% chance that demand exceeds 550 units on a given day.

Advanced Topics: ANOVA and Chi-Square Tests

Question 6: One-Way ANOVA

Three different marketing strategies were tested across 5 regions each, with the following sales increases (in units): | Strategy A | Strategy B | Strategy C | |||| | 20 | 25 | 30 | | 22 | 27 | 29 | | 19 | 26 | 31 | | 21 | 24 |

Sample Questions and Detailed Solutions

1. Descriptive Statistics and Data Interpretation

Question: A company records the quarterly sales figures (in thousands of dollars) for the past year as follows: 120, 135, 150, 145, 160, 155, 140, 130, 125, 165, 170, 155. Calculate the mean, median, and standard deviation of these sales figures. Answer: Step 1: Organize data in ascending order: 125, 130, 135, 140, 145, 150, 155, 155, 160, 165, 170 Note: There are 12 data points. Step 2: Calculate the Mean: Sum of all values = $125 + 130 + 135 + 140 + 145 + 150 + 155 + 155 + 160 + 165 + 170 = 1730$ Mean = Total Sum / Number of observations = $1730 / 12 \approx 144.17$ Step 3: Calculate the Median: Since there are 12 observations (even), median is average of the 6th and 7th values. 6th value = 150, 7th value = 155 Median = $(150 + 155) / 2 = 152.5$ Step 4: Calculate the Standard Deviation: Variance (s^2) is calculated as: $s^2 = \sum (x_i - \text{mean})^2 / (n - 1)$ Calculations: - $(125 - 144.17)^2 \approx 364.36$ - $(130 - 144.17)^2 \approx 201.19$ - $(135 - 144.17)^2 \approx 84.07$ - $(140 - 144.17)^2 \approx 17.39$ - $(145 - 144.17)^2 \approx 0.69$ - $(150 - 144.17)^2 \approx 33.94$ - $(155 - 144.17)^2 \approx 117.0$ - $(155 - 144.17)^2 \approx 117.0$ - $(160 - 144.17)^2 \approx 249.39$ - $(165 - 144.17)^2 \approx 437.68$ - $(170 - 144.17)^2 \approx 660.10$ Sum of squared deviations $\approx 364.36 + 201.19 + 84.07 + 17.39 + 0.69 + 33.94 + 117.00$

+ 117.00 + 249.39 + 437.68 + 660.10 $\approx$ 2282.41 Variance = 2282.41 / (12 - 1) = 2282.41 / 11 $\approx$ 207.49 Standard deviation = $\sqrt{207.49} \approx 14.41$ Summary: - Mean $\approx$ 144.17 - Median = 152.5 - Standard deviation $\approx$ 14.41

2. Probability Distribution and Calculations

Question: A marketing survey indicates that 30% of consumers prefer product A over product B. If a random sample of 10 consumers is surveyed, what is the probability that exactly 4 consumers prefer product A? Assume independence. Answer: This is a binomial probability problem where: - $n = 10$ - $p = 0.30$ - $k = 4$ The binomial probability formula: $P(X = k) = C(n, k) p^k (1 - p)^{(n - k)}$ Calculate: $C(10, 4) = 210$ $P = 210 (0.30)^4 (0.70)^6$ Compute each term: - $(0.30)^4 = 0.0081$ - $(0.70)^6 \approx 0.117649$ Now: $P = 210 \cdot 0.0081 \cdot 0.117649 \approx 210 \cdot 0.000954 \approx 0.200$ Therefore, the probability that exactly 4 consumers prefer product A is approximately 20%.

3. Hypothesis Testing

Question: A manufacturing process produces widgets with a mean weight of 50 grams. A quality inspector believes the process has changed, and the mean weight is now different. A sample of 36 widgets yields a sample mean of 48.5 grams with a standard deviation of 4 grams. Test at a 5% significance level whether the process has changed. Answer: Step 1: State hypotheses: - Null hypothesis (H_0): $\mu = 50$ grams - Alternative hypothesis (H_1): $\mu \neq 50$ grams Step 2: Identify test statistic: Since the sample size is large ($n=36$), we can use a Z-test: $Z = (\bar{x} - \mu_0) / (s / \sqrt{n})$ Where: $\bar{x} = 48.5$ $\mu_0 = 50$ $s = 4$ $n = 36$ Calculate standard error: $SE = 4 / \sqrt{36} = 4 / 6 \approx 0.6667$ Calculate Z: $Z = (48.5 - 50) / 0.6667 \approx (-1.5) / 0.6667 \approx -2.25$ Step 3: Critical value: At $\alpha = 0.05$ for a two-tailed test, critical Z-values are ± 1.96 . Step 4: Decision: Since $-2.25 < -1.96$, we reject H_0 . Conclusion: There is sufficient evidence at the 5% significance level to conclude that the process mean weight has changed from 50 grams.

4. Regression Analysis and Correlation

Question: A researcher collects data on advertising expenditure (in \$000s) and sales (in \$000s) for 6 months: | Month | Advertising (\$000s) | Sales (\$000s) | |||| | 1 | 2 | 20 | | 2 | 3 | 25 | | 3 | 4 | 30 | | 4 | 5 | 35 | | 5 | 6 | 40 | | 6 | 7 | 45 | Determine the correlation coefficient and interpret the strength of the relationship. Answer: Step 1: Calculations of means: - Mean of advertising: $(2 + 3 + 4 + 5 + 6 + 7) / 6 = 27 / 6 = 4.5$ - Mean of sales: $(20 + 25 + 30 + 35 + 40 + 45) / 6 = 195 / 6 \approx 32.5$ Step 2: Calculate numerator for correlation coefficient: $\sum[(X_i - \bar{X})(Y_i - \bar{Y})]$: | Month | X_i | Y_i | $X_i - \bar{X}$ | $Y_i - \bar{Y}$ | Product | ||||| | 1 | 2 | 20 | -2.5 | -12.5 | 31.25 | | 2 | 3 | 25 | -1.5 | -7.5 | 11.25 | | 3 | 4 | 30 | -0.5 | -2.5 | 1.25 | | 4 | 5 | 35 | 0.5 | 2.5 | 1.25 | | 5 | 6 | 40 | 1.5 | 7.5 | 11.25 | | 6 | 7 | 45 | 2.5 | 12.5 | 31.25 |

Access to Sample Mba Statistics Questions With Answers has quietly reshaped how people relate to written knowledge. Reading is no longer confined to fixed schedules or specific places. Instead, it adapts to personal routines, individual curiosity, and changing priorities.

What stands out most is control. Readers decide when to start, where to pause, and which parts deserve more attention. This sense of control often leads to better focus and stronger retention, especially when dealing with complex or layered material.

Unlike traditional reading habits that demand long, uninterrupted sessions, downloadable books support flexible engagement. A chapter can be explored briefly, revisited later, and reflected upon over time. Understanding develops gradually, shaped by repetition rather than pressure.

The reliability of PDF format reinforces this experience. Layout, diagrams, and references remain intact across devices. Readers encounter the same structure each time, allowing ideas to feel familiar and easier to navigate. This stability is particularly valuable for academic, instructional, and reference-based content.

Interaction further deepens involvement. Highlighting key passages or writing marginal notes turns reading into an active process. Over time, the book reflects the reader's evolving understanding, capturing insights that may not surface during a single reading.

Search functionality adds practical value. Readers do not need to rely on memory alone. Important sections can be located instantly, making the book useful both for study and quick consultation. This efficiency encourages repeated use rather than one-time consumption.

Legitimate platforms play a vital role in maintaining quality and trust. Libraries, open-access repositories, and academic institutions provide carefully curated collections. By relying on these sources, readers ensure accuracy while supporting responsible distribution.

Affordability expands opportunity. When financial barriers are reduced, exploration increases. Readers are more willing to engage with unfamiliar subjects, discover new perspectives, and broaden their intellectual range without hesitation.

For students, this access supports consistent learning habits. Materials remain available beyond classroom hours, allowing concepts to be reinforced at a comfortable pace. Notes and highlights stay organized, helping structure revision and review.

Professionals use downloadable books differently. They approach them as tools rather than assignments. Sections are consulted as needed, insights applied directly, and references revisited when challenges arise. Learning integrates naturally into work routines.

Personal development also benefits. Reading becomes less about completion and more about reflection. Ideas are allowed to linger, connect, and mature. Over time, this leads to a deeper relationship with the subject matter.

Accessibility features quietly increase inclusivity. Adjustable display options and reading assistance tools ensure that more people can engage comfortably. Knowledge becomes easier to approach without drawing attention to limitations.

Organization supports continuity. A personal library grows alongside interests, preserving progress and context. Returning to a familiar book feels seamless, even after long breaks.

There is also a shift in mindset. When access is consistent, learning feels less urgent and more intentional. Readers engage because they want to, not because they must.

Global availability further enriches the experience. People from different backgrounds interact with the same material, bringing diverse interpretations and insights. This shared access strengthens the collective value of knowledge.

Over time, books stop feeling temporary. They remain available as references, reminders, and sources of renewed understanding. The relationship extends beyond a single reading session.

Downloading Sample Mba Statistics Questions With Answers supports this evolving relationship. It respects how people learn, adapt, and revisit ideas. The book remains present without demanding attention, ready whenever curiosity returns.

What develops is not just familiarity with content, but confidence in learning itself. The reader knows that understanding can grow gradually, shaped by patience and repeated engagement.

And in that steady rhythm—open, pause, return—knowledge finds its place naturally.
