3. **Electromyogram (EMG):** Captures muscle electrical activity.
4. **Photoplethysmogram (PPG):** Measures blood volume changes in the microvascular bed of tissue.

5. **Blood pressure signals:** Monitor arterial pressure over time.

Characteristics of biomedical signals: - Low amplitude - Presence of noise and artifacts - Non-stationary and time-varying nature - Multi-dimensional and multichannel data Understanding these characteristics is vital for designing effective processing techniques.

Fundamental Principles of Biomedical Signal Processing

The core principles of biomedical signal processing revolve around extracting relevant information from raw signals, filtering out noise, and representing data efficiently for analysis.
