Understanding Trichotillomania

What Is Trichotillomania?

Trichotillomania, also known as hair pulling disorder, is classified as a mental health condition characterized by an uncontrollable urge to pull hair, leading to noticeable hair loss and distress. It is considered a body-focused repetitive behavior (BFRB), often linked to underlying emotional or psychological factors.

Prevalence and Demographics

While trichotillomania can affect individuals of all ages, it most commonly begins in childhood or adolescence. Some key statistics include:

1. Estimated prevalence: 1-2% of the population
2. More common in females than males, especially during teenage years
3. Often co-occurs with other mental health conditions such as anxiety or obsessive-compulsive disorder (OCD)

Signs and Symptoms

Recognizing trichotillomania involves identifying typical behaviors and consequences, including:

1. Persistent hair pulling from the scalp, eyebrows, eyelashes, or other body areas
2. Repeatedly inspecting or touching hair to find the next strand to pull
3. Noticing hair loss or bald patches
4. Feeling tension or anxiety before pulling and relief afterward
5. Experiencing shame or embarrassment about hair loss

Causes and Risk Factors

Biological Factors

Research suggests that genetics and neurobiological factors may influence trichotillomania. Some aspects include:

1. Family history of BFRBs or related mental health issues
