Sample Questions and Corresponding Answer Key Insights

Below are typical questions from the PhET solubility lab exercises, with guidance on how to interpret the answer key:

Q1. What happens to the solubility of salt as temperature increases?

Answer Key Insight:

Most salts exhibit increased solubility with rising temperature. The answer key will show that, for example, sodium chloride's solubility increases slightly with temperature, which aligns with the general trend observed in solubility curves.

Q2. How does the solubility of sugar change with temperature?

Answer Key Insight:

Sugar's solubility increases significantly with temperature, meaning warmer solutions can hold much more sugar. The answer key confirms this trend and may provide specific numerical values at different temperatures.

Q3. What is the difference between saturated and supersaturated solutions?

Answer Key Insight:

A saturated solution contains the maximum amount of solute at a given temperature, with no more dissolving. Supersaturated solutions hold more solute than typically possible, often created by dissolving solute at high temperature and then slowly cooling. The answer key explains how to identify these states based on visual cues and solute behavior.
